

## Summers are getting hotter – honest

It might not seem like it, but warm summer days are up to 2C hotter now than in the 1950s due to climate change, according to new study by the London School of Economics.

Dr David Stainforth, the lead author on the paper, said global warming will affect different areas of Europe in different ways.

He said the study will help policymakers to plan for further climate change in the future.

“Climate is fundamentally the distributions of weather. As climate changes, the distributions
