## GLIMPSE possible futures

- ∅ If we cannot predict an extreme event, can we instead gain a sense of when it is possible or not possible for it to occur?

Our project on *Gauging the Limitations of Imperfect Model Prediction with Sculpted Ensembles* (GLIMPSE) has looked at the dynamical characteristics of extreme events in time series data to provide indications of possible upcoming events without making probabilistic forecasts.

GLIMPSE is a pilot project funded by EPSRC's ReCoVER Network
