

WORKSHOP – Roles of Climate Models

- Place: IPO Building, Room 0.11, Eindhoven University of Technology, the Netherlands
- Oct 31st– Nov. 1st

Climate models influence our understanding of climate change, its causes and its future. They are a central technology of climate science. But they are also sources of information for far-reaching policy decisions, sites of multidisciplinary integration, products of distributed epistemic labor, and much more. As a consequence, climate models are of significant interest to scholars in philosophy, history of science, and political science.

- Joyashree Roy (Jadavpur University)
- Gavin Schmidt (NASA Goddard Institute for Space Studies)
- David Sexton (the MET Office)
- Lenny Smith (London School of Economics)
