

**Beyond Barker: Advantageous Early-Life environments Cushion the Genetic Risk for Ischaemic Heart Disease**

*Stephanie von Hinke with Samuel Baker, Pietro Biroli and Hans van Kippersluis)*

**Abstract:**

In one of the first papers on the impact of early-life conditions on individuals' health in older age, Barker and Osmond (1986) show a strong positive relationship between infant mortality rates in the 1920s and isch nshsrvhonnh8 (h)d()Tj
