to the crisis. Leaders can easily point out to exogenous causes, to the surprise and their lack of anticipation in order to eventually (re)assure their own legitimacy and that of state institutions and the state more generally. By focusing on the risk event, the goal of crisis management is to return as quickly as possible to the prevailing order without addressing the root causes of the failures, while compensating the victims for their losses. Thus, crisis management helps to reaffirm the legitimacy of the state at exactly the time when it is put into question.

ugh crisis management purports anage a range of events, it does not to make sense of these situations by sing solely on their consequences. xample, after the recent terrorist ks in France, executive leaders imented exactly that kind of strategy: se of emergency management and served to maintain the legitimacy executive power, but did not at all ess the social, cultural and political s that formed the background to events. The problem with such ; egy is that tackling the root causthe events lies not within the of the agencies, departments or in charge of crisis management, efalls upon other organizations. e have little incentive or interest in g to figure out what could actually rong in the policies they pursue.

vesting in crisis management, Euan authorities erect barriers against ioning the policy decisions that lie nd the crisis. This is not just a blame ention strategy; it avoids suggesting certain policies have led to failures crises that could have been avoided, least anticipated. Thus, it prevents uestioning of those political rethat have sought to reduce the re state by advocating self-regulaby individuals and markets. This ars clearly, for instance, in the proon of preparedness and resilience ourses in lieu of actual risk prevenand reduction policies. Furthermore, management itself adopts the age of budgetary orthodoxy in
